

## Claim Amendments

1. (currently amended) A method of revealing an identity of a first communication device in a wireless communication system ~~for establishing a communication link between the communication device with a further communication device based on the identity of the communication device~~, the first communication device having means for outputting the identity in a perceptually noticeable form, said method comprising:

providing a signal in the first communication device in response to an action on the first communication device; and

outputting in the perceptually noticeable form on said means, in response to the signal, the identity ~~in the perceptually noticeable form of the first communication device~~, so that the outputted identity can be used to establish ~~the a communication link between the first communication device and a second communication device in the wireless communication system~~.

2. (currently amended) The method of claim 1, wherein the action comprises powering up the first communication device.

3. (currently amended) The method of claim 1, wherein the first communication device comprises a displaying device, and said outputting comprises displaying on the displaying device a visible message indicative of the identity.

4. (currently amended) The method of claim 1, wherein the first communication device is operatively connected to a displaying device, and said outputting comprises sending information indicative of the identity to the displaying device so as to allow the displaying device to display a visible message indicative of the information.

5. (currently amended) The method of claim 1, wherein the first communication device comprises a sound producing device, and said outputting comprises announcing an audible message indicative of the identity on the sound producing device.

6. (currently amended) The method of claim 1, wherein the action comprises sending a communication signal from the ~~further~~ second communication device to said first communication device.
7. (currently amended) The method of claim 1, wherein the first communication device and the ~~further~~ second communication device are Bluetooth devices.
8. (currently amended) The method of claim 1, wherein the first communication device comprises a Bluetooth image receiver.
9. (currently amended) The method of claim 1, wherein the first communication device comprises a Bluetooth TV set.
10. (currently amended) The method of claim 5, wherein the communication link comprises an initial communication link for pairing the first communication device with the ~~further~~ second communication device, and wherein said outputting is carried out only if the communication link is the initial communication link.
11. (previously presented) A method of establishing an initial communication link between a first communication device and a second communication device, the first communication device having a device identity and means for outputting the device identity in a perceptually noticeable form, said method comprising:
  - outputting on said means the device identity in the perceptually noticeable form, in response to an action on the first communication device; and
  - providing to the second communication device information indicative of the outputted identity.
12. (original) The method of claim 11, wherein the action comprising powering up the first communication device.

13. (original) The method of claim 11, wherein the action comprises sending a signal from the second communication to the first communication device.

14. (currently amended) The method of claim 11, wherein said information providing is carried out by a user.

15. (original) The method of claim 11, wherein the first communication device comprises an image viewer.

16. (original) The method of claim 11, wherein the first communication device comprises an image receiver.

17. (original) The method of claim 11, wherein the first communication device comprises a Bluetooth TV set.

18. (original) The method of claim 11, wherein the first communication device comprises a Bluetooth image displaying device.

19. (original) The method of claim 11, wherein the first communication device comprises a Bluetooth image receiver operatively connected to an image displaying device.

20. (original) The method of claim 11, wherein the second communication device comprises a mobile terminal.

21. (currently amended) A communication device ~~having a device identity~~ in a wireless communication system, the communication device having a device identity, ~~the wireless communication system comprising at least a further communication device for communicating with the communication device~~, said communication device comprising:

a storing device for storing data indicative of the device identity of the communication device; and

an outputting device, operatively connected to the storing device, for providing information in a perceptually noticeable form indicative of the device identity on said outputting device, so ~~as to allow a user to use~~ that the provided information is used to establish an initial communication link between the communication device and ~~the further~~ a further communication device in the wireless communication system.

22. (original) The communication device of claim 21, further comprising a displaying device operatively connected to output device for displaying a visible message indicative of the device identity.

23. (original) The communication device of claim 21, wherein the output device is operatively connected to a displaying device for displaying a visible message indicative of the device identity on the displaying device.

24. (original) The communication device of claim 21, comprising an image viewer.

25. (original) The communication device of claim 21, comprising an image receiver.

26. (original) The communication device of claim 21, comprising a Bluetooth image receiver operatively connected to a non-Bluetooth image display device.
